Subject: Update of RESNET Standard Development on the Calculation of Embedded Carbon in Residential Building Materials

RESNET Embodied Carbon Advisory Committee

Based on the recommendation of the Advisory Committee the RESNET Board has authorized RESNET developing an ANSI candidate standard on the calculation of residential building materials. RESNET will follow its ANSI Standards Development Policy and Procedures which will include a public review and comment process. RESNET's ANSI Standards Development Policy and Procedures is posted at https://www.resnet.us/wp-content/uploads/archive/resblog/2017/10/RESNET_SDO_Procedures.pdf

The next steps is the recruitment of the members of the consensus Standard Development Committee and Technical Task Force. RESNET has appointed Chris Magwood of RMI to chair this effort.

With this action the task for the RESNET Embodied Carbon Advisory Committee has been completed.

I appreciate the effort you put into this endeavor. It laid the groundwork for the next steps.

We will put you on the list to receive updates on the RESNET standard development process.
